Drink Water Therapy For Special Children(OKU)

Approval by Dr LONG QUAN WEI ~ Duosuccess TMC

11/2013 on time in the school holidays, undergoing therapy for Children with Disabilities, which consists of downsindrome, slow learner,

hyperactive, physically handicapped and others.

Method: Drinking Water RAK x 6 -24 box bottle, 500ml / person

Recipient: Children -10 people: Teachers- 3: Commitee- 2 people

Testimonial: After practicing water therapy

1) Students with Down Syndrome + slow learner (twin) Age of 7 years

> Can socialize, play and control the emotions well.

2) Slow Learner Students Age of 12 years

> Can take care of yourself and take orders well.

3) Students with Down Syndrome - age of 16 years

> Recovering from a position of weakness due to heart failure.

> back healthy and active even before displaced in ICU and Hospital Doctor confirms there is no hope for a healthy back.

4) Slow Learner Students and physical disabilities Age of 16 years

> Return to active and energetic.

> Get a driver's license after better physical health.

5) Students with Down Syndrome - age of 15 years

> Can take care of yourself and live a better life. > Can help take care of his grandmother and flying household chores (washing vegetables and others) like normal children.

6) Students Hyperactive - 14 years old

> The situation itself can be controlled and can follow instructions carefully.

7) Students Hyperactive - 14 years old

> The situation itself can be controlled and can follow instructions carefully.

> Can responding and trying to communicate.

Teachers and Commitee

8) Teacher A~ asthma, colds and body weak

After drinking, Fell Pain asthma, colds for a month and have to wear gas. Now colds are less and eager to take care of children (first look lazy). Have normal bowel movements (first 2 days 1 times)

9) Teacher B ~ After Drinking, weak blood pressure can MC for 14 day

spirit grow well and can manage critical issues well. Can award recently and look younger.

10) Committee ~ After taking 3 boxes, feeling dizzy and stopped drinking. About TMC therapy, experienced any reaction is a sign of better recovery. (Encouraged to continue to practice). Now improved health and emotional control. (First irritability). Hope to continue making and will be shared with family members.

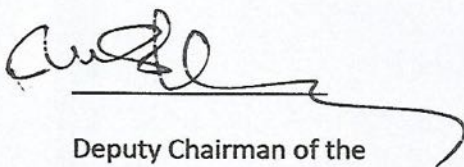

Conclusion:

* Change: Management of the child's behavior improves, (clothes, waste water etc) .Can ease of care to children with disabilities . Teachers can concentrate better and care, as well as the parents who responded positively to the development of their children.

Rumah Amal Kulim suggest that this therapy can be shared drinks with them they were having problems as above.

True,

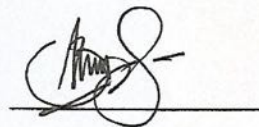

Confirmed,
